

Awnings

Practical, space-efficient shelters

Awnings provide an efficient practical mean of providing shelter for areas adjacent to buildings and walls.

They are particularly useful on the front elevation of buildings opening out onto pavements or areas with restricted space.

Fixed framed awnings and free-standing double awnings can also be supplied where needed.

Shades are able to offer a wide range of acrylic retractable awnings. Our engineers are also able to survey and install as required.

With 47 colours of frame and hundreds of fabric colours to choose from we can provide you with the awning that suits and compliments its environment.

We also supply a range of accessories to provide extra protection and durability, corporate branding, heat and lighting solutions.

Case Study

Cath Kidston Ltd

Cath Kidston Ltd is famous for her vintage inspired prints on everything from clothing and accessories to a variety of homeware products and furnishings.

As the shop displays a large amount of clothing in its window, it was essential to keep them sheltered from the sun.

Here we installed two electric made-to-measure box awnings in an exact colour match to the shop's exterior using a stylish red and white stripe.

This is not only practical but extremely eye-catching to the shoppers on this popular high street.
