

Heat & Light

Customer Comfort – all-year-round

Heating and lighting solutions are essential to making the most of your outdoor trading area.

Effective heating and lighting systems offer customers the ability to extend their outdoor trading hours with the particular emphasis on smoking areas, expected to be used all-year-round.

Crucially, our environmentally friendly low energy Fluorescent lights and high output Quartz Heaters offer efficient directional heating ensuring heat is distributed toward the people rather than energy being wasted on attempting to heat the air.

These heaters can be mounted on walls, steel frames, timber frames or the integral framework of giant umbrellas. In the case of the latter, our heating systems are totally integrated allowing umbrellas to be opened and closed with all heaters and lights in remaining in place.

We also have an addition to our range – the free standing Deluxe Zeus Patio Heater. This unique product to Shades combines the use of both heating and lighting providing the perfect solution.

The technological benefits of this product include:

- > Latest Carbon Fiber technology in the heating elements
- > Built in PIR system
- > Safety Cut-off tilt switch
- > Integrated light
- > IPX-5 water resistant

This product has everything required to satisfy the UK market

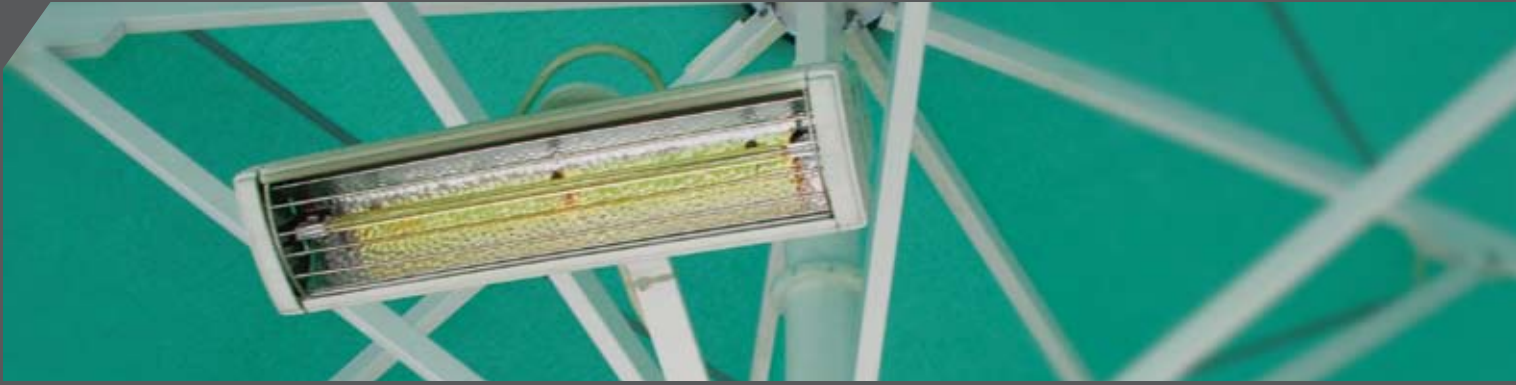

Fitting Options

Wall mounted Heaters

Under Umbrella Heaters

Stand Alone Heaters

Case Study

The Parrot Bar, Cheltenham

This popular bar situated in the centre of Cheltenham has always struggled to source a suitable type of outdoor heating.

Being a listed building many restrictions are in place as to what structural applications can be made.

Shades of Comfort combated this problem by suggesting the new Deluxe Zeus Heater - a unit that is simply plugged into an outside plug socket and switched on.

Fully weather-proof with a unique design this unit is as eye-catching as it is practical - a fantastic option for almost every situation.
